

THE INTERACTIVE DIGITAL BOARD

Draw here. Show everywhere.

Everything you draw and manipulate on your tablet appears live on the room's projector, television or digital board.

How it works

1 Open the presenter

On your tablet (iPad and Apple Pencil supported), open the Present page: a 5-character room code appears.

2 Connect the screen

On the computer connected to the projector or television, open the display page and enter the code, or scan the QR code.

3 Present

Write, draw, manipulate: the room follows live. Finish with the "End of presentation" screen.

Built for the stage and the classroom

Pressure-sensitive pen, highlighter, eraser, arrows, shapes and laser pointer.

Import a PDF or an image, then underline, circle and annotate live. A PowerPoint is exported to PDF first.

Apple Pencil detected: finger input is turned off automatically so you can write without stray touches.

Multiple pages, undo and redo, PNG export, tabs to return to the working board.

Teaching modules

From 3ème to Terminale • French curriculum

Mathematics

Function graphs (up to 4), derivative, roots, extrema, tangent.

Table of values for the chosen function.

Rectangle, triangle, circle: enter the values, the detailed calculation appears.

Physics

Animated projectile: flight time, range, trajectory.

Ohm's law, resistors in series and in parallel.

Pendulum: pull the bob, the angle and period follow live.

Chemistry

Periodic table of 118 elements: tap one for its card and molar mass.

Equation balancing, molar mass, concentration, dilution.

pH: move the slider, the value and the acidic or basic character follow.

Biology

Clickable heart: the name of each part is shown.

Blood circulation animated in 7 steps.

Genetics: Punnett square. DNA, mRNA, protein.
